

# THE MARKET TIMING REPORT

MASTERING PROFITS

30th September 2018

Volume 5 Edition 10

## Key Dates

11th and 24th to 26th October

Key turning point dates for the S&P500, Crude Oil, Gold, EURUSD, Dollar Index

“Education is our passport to the future, for tomorrow belongs to the people who prepare for it today.”

Welcome to October 2018!

As I have been forewarning you since the January report, this is the time when things start to get seriously interesting!

Geopolitical cycles are coming in from many different angles.

As we go to press, Trump is facing a few challenges over a man called Brett Kavanaugh.

Head back 45 years to 20 October 1973 and the then incumbent of the White House, President Richard Nixon was under extreme pressure to say the least.

You see, five months earlier on 18 May 1973, Attorney General Elliot Richardson appoints Archibald Cox a special prosecutor to lead the investigation into Nixon's re-election campaign and the Watergate scandal.

Saturday, 20 October 1973 would become known as "The Saturday Night Massacre."

Why?

On this day Nixon orders The Attorney General and his deputy William Ruckelshaus to fire Cox.

Not happy with this breach of protocol, Richardson and Ruckelshaus resign.

They stand up to the president. They are not prepared to execute this command.

To say that Nixon was rankled by the activities of Cox would be an understatement. Cox was leading an independent investigation into the White House misconduct.

There was political uproar. Nixon severely compromised himself but he was on the way out anyway. The road to impeachment lay ahead of him.

We, as students of cycles, know that the 45 year time period is significant.

The moral of the story of this time period is that the then president exceeded his remit and breached his powers to great detriment. This same situation is quite possible over the next few weeks. Expect matters to escalate within the White House.

And speaking of President Trump, his personal cycles suggest that the mid-term elections will prove to be a challenge for him.

The other big story of global proportion is the 45 year anniversary of the Yom Kippur war which broke out during the first week of October 1973.

The ramifications of this were bordering on catastrophic.

This was covered in last month's issue as well as the January 2018 special edition.

As a recap, and Arab-Israeli conflict broke out, and OPEC raised the price of oil again and again bringing the Western world to its knees.

The architect and key proponent for these price hikes was none other than Mohammad Reza Pahlavi, the Shah of Iran. A one-time friend of America and Britain, the Shah was instrumental in convincing his fellows that oil prices should be raised.

Move on 45 years. Timeline October 2018. President Trump is about to implement extreme sanctions against Iran.

The cycle repeats in a similar but not necessarily identical manner. Oil is the focus of attention. America and Iran are at odds with each other once again. Exactly on schedule.

Now let's take a look at the 82 year cycle. This relates to revolution and sudden change. Those of you that have read our book "Zero Hour" will have a greater understanding of it.

The key point is that we are in a modern day revolution. The election of Trump, the challenges with Brexit and the global polarisation that we are seeing signify this. And these events relate back in mathematical sequence to the rise of Hitler due to a "victimised" Germany following the Great War, the revolutions in Europe relating to the work of Karl Marx, the American Revolution and also the Protestant Reformation led by Martin Luther.

They fit in this 82 to 84 year cycle sequence – precisely.

We would be foolish to ignore this time cycle.

So let's head back 82 years.

Specifically, to 2 October 1936.

The French finally devalue their Franc – about time, too. The British pound devalued in 1931 the US dollar in 1933. Better late than never.

Two days later, 4 October 4 1936 – the Italians devalue the lira.

Bingo.

Right on schedule. As we go to press, Italy is in crisis. This is financial crisis of great magnitude.

None of this bodes well for the euro against the dollar.

This cycle is upon us. Within this report you will see we are also heading into a potentially bearish phase for the euro.

Italy's economy is the third largest in the Eurozone. And once Britain leaves the European Union, Italy will be the third largest economy within the Eurozone.

So it's not good news.

The nations proposed deficit is likely to push Italy into conflict with the European Union's deficit rules.

The 82 year cycle repeats – right on schedule.

Major cycles also come in from other angles in Europe. On October 1, 1936 General Franco seizes control of Spain. The Spanish dictatorship had begun.

Bring in the 100 year cycle.

Czechoslovakia proclaims independence from the Austro-Hungarian Empire on 28 October 1918.

Yugoslavia was also making progress in the same direction.

All these cycles suggest that Europe is beginning to polarise with greater momentum.

None of this is good news for the euro.

But there is more.

Let's bring Germany into the fold.

The hundred year cycle takes us back to October 20, 1918. Germany, the aggressor nation in the Great War, is attempting to secure concessions. They fear the end is nigh. At the time they didn't know it but there were only 22 days left to the end of the First World War.

Enter the 72 year cycle.

Timeline October 1946. The Second World War has ended.

The Nuremberg trials have been in progress since 20 November 1945.

Between 30 September and 1 October 1946 sentencing takes place.

On October 16, 1946 the Nazi regime comes to an end. 10 of its architects are executed. The truth is actually nine are executed including Hermann Goring. Martin Bormann was missing presumed already dead.

So the 100 year cycle in the 72 year cycle come together this October.

What does this mean?

To be quite honest, I really don't know.

It does signify conclusions and peace. Or perhaps it points to major change.

Realistically, it signifies that Germany is on the back foot.

There can only really mean one thing.

Europe is heading into distress.

In conclusion, several things are clear.

Presidential chaos in the United States is possible.

Tensions within the Middle East are likely to heighten.

Europe stances weakening.

The savvy folk amongst you will know how to handle this information.

Stay safe!

THE MODERN DAY REVOLUTION CONTINUES!

Now onto the markets.

As mentioned last month, we were approaching some important resistance levels, especially within the two key Nasdaq Indices.

This chart of the Nasdaq 100 is updated. As forecast last month, the index peaked at the coincidence on the 150% price extension - the upper blue horizontal line - and the upper parallel of the orange pitch fork.

We pulled back from this and are approaching a retest of this level. However, a key point to note is that we continue to make higher lows so the trend remain up.

The following page shows the Nasdaq Composite Index. Again this has reacted off the 150% extension as shown by the purple arrows. As with the Nasdaq 100, we continue to make higher lows so the trend remain up.

The DJIA index is shown below. This was the only major index not to have broken out above the January high. It has now double topped after making a slightly newer high. However, it has just hit the median line so it could easily react to the upside.

[www.optuma.com/MTR](http://www.optuma.com/MTR)

Dow Jones Industrial Average

The S&P500 index is shown below. This had already broken out above the January high. Again this indexes making higher lows and is also presently bouncing off the lower parallel of the pitchfork. This suggests a continuation up. However, any breakdown of this and a trade below the January high would be significant.

So, at the time of writing, all the markets remain in a bullish position. October can see shocks and our PFO oracle dates shown later in the report are strong. This month the US equities are traders markets - i.e., we need to watch how they react at each turn point. Seasonality favours a pullback in the latter part of the month into around the 26th October - see S&P500 section.

We continue our monthly breakdown of analysis which is useful information for shorter term traders. So this will be a tutorial on how to analyse the market.

The purpose behind this is to seek clues that suggest direction as well as support and resistance points especially when used in conjunction with the turning points we generate from our profit finding oracle system.

You can replicate this with your own trading software. We use Optuma and our readers can get a special trial by clicking on this link.

[www.optuma.com/MTR](http://www.optuma.com/MTR)

This month we move onto the December E Mini S&P500 contract.

We draw in our channels that have been operative now for several months. These include the midway lines. The other key point to note is that since April we have been seeing higher lows and higher highs. This is confirmation of a rising market at least in the short term.

Next, we add the pitchfork below that has been operative and providing resistance. Given that we are on the lower parallel of the pitchfork, it is possible that we could head up from here.

Our “pattern following time counts” were described in detail over the last five months and here is the latest update. The original narrative is reproduced below - as the background to this technique - for the benefit of new readers and as a reminder to our regular friends.

This technique is based on pattern matching.

In previous editions we observed that there are only two years that we can locate in which the high for the year came in late January, early February. These years are 1934 and 1994. These dates are 60 years apart and in relation to 2018 the time spans are 84 years and 24 years - all three time windows are valid cycles as regular readers will know! One of the several techniques we look at in forecasting is road mapping.

This involves seeing if the markets unfold in similar fashion.

This month, however, we have seen breakouts above the January highs so this reduces the weight of this system. Having said that, the last forecast window did produce a turn. On this basis we continue to show this system and project from it.

Here is the chart for 1934:

[www.optuma.com/MTR](http://www.optuma.com/MTR)

## Dow Jones Industrial Average

In the chart above, the swings were made at

- 5 bars
- 8 bars
- 34 bars
- 51 bars - close to 2018 pattern
- 67 bars
- 92 bars
- 118 bars
- 139 bars
- 154 bars
- 175 bars
- 182 bars
- 208 bars
- 218 bars

Here is the chart for 1994. In the chart above, the swings were made at

5 bars - same as 2018 and 1934

13 bars

21 bars - same as 2018

33 bars - same as 1934

43 bars - within 1 day 2018

49 bars

55 bars - same as 2018

63 bars - close to 1934

69 bars

93 bars - close to 1934

101 bars

126 bars

140 bars - close to 1934

147, 157, 171, 181, 206 bars

You will note that there are many matches; many of which are to the day. Take a moment to study these overlays; you may need to print out these three pages. 1994 has a lot of matches with this year so far. Some turns invert. Both 1934 and 1994 match at 67-69 bars. The sequence continues to align and when these dates align with the PFO histogram dates they are likely to be high probability turning points.

In the chart below, we have started a count of the bars from the all time high this January. We are using the Dow Jones Industrial Averages as we do not have S&P500 data for 1934 and we have to compare like with like.

Here is the pattern for 2018 so far:

So far this has achieved a lot of really accurate matches to both the 1934 and 1994 patterns.

Looking ahead - this system is revealing the 1st October, 5th October and the 15th to 16th October. These dates are close to our PFO dates under the S&P500 section.

We are repeating these charts for the benefit of new readers as they are very relevant and should the markets head higher, they will likely identify MAJOR price targets. In these two charts, we have taken the ranges from the 1974 lows - 598 on the Dow and 60.96 on the S&P500 - to the 2007 highs and then doubled that range. This gives valid targets of around 27800 on the Dow and 3091 on the S&P500.

# How Did The Cycles Unfold?

# How Did The Cycles Unfold?

## Last Month's Report Card Excerpts

[www.optuma.com/MTR](http://www.optuma.com/MTR)

### Gold Futures

[www.optuma.com/MTR](http://www.optuma.com/MTR)

### S&P 500 INDEX

**INVESTORS:** A weekly cycle is playing out as we write. The first week of November is significant on a weekly cycle basis and some strong monthly cycles also exist for November.

The 10 year cycle sees the continuation of a strong sell off into the 28th October with a pullback from the 11th to the 21st October.

The 20 year cycle sells off into 8th October then rallies into 21st October pulling back slightly into 27th October.

The 30 year cycle rallies into 23rd October then sells off into 28th October.

The 60 year cycle rallies into 13th October then sells off into 27th October.

All four cycles show a turn around the 27th to 28th October - in the examples above they have been lows.

Key turning point dates derived from PFO Histograms:

11th October into weekend

18th October

24th to 25th October

Looking ahead into November - these dates are provisional and will be updated in the next report as the cycles are fine tuned. They may also change so you must read the next edition. Other turn point dates will be added in due course.

10th to 13th November

24th November

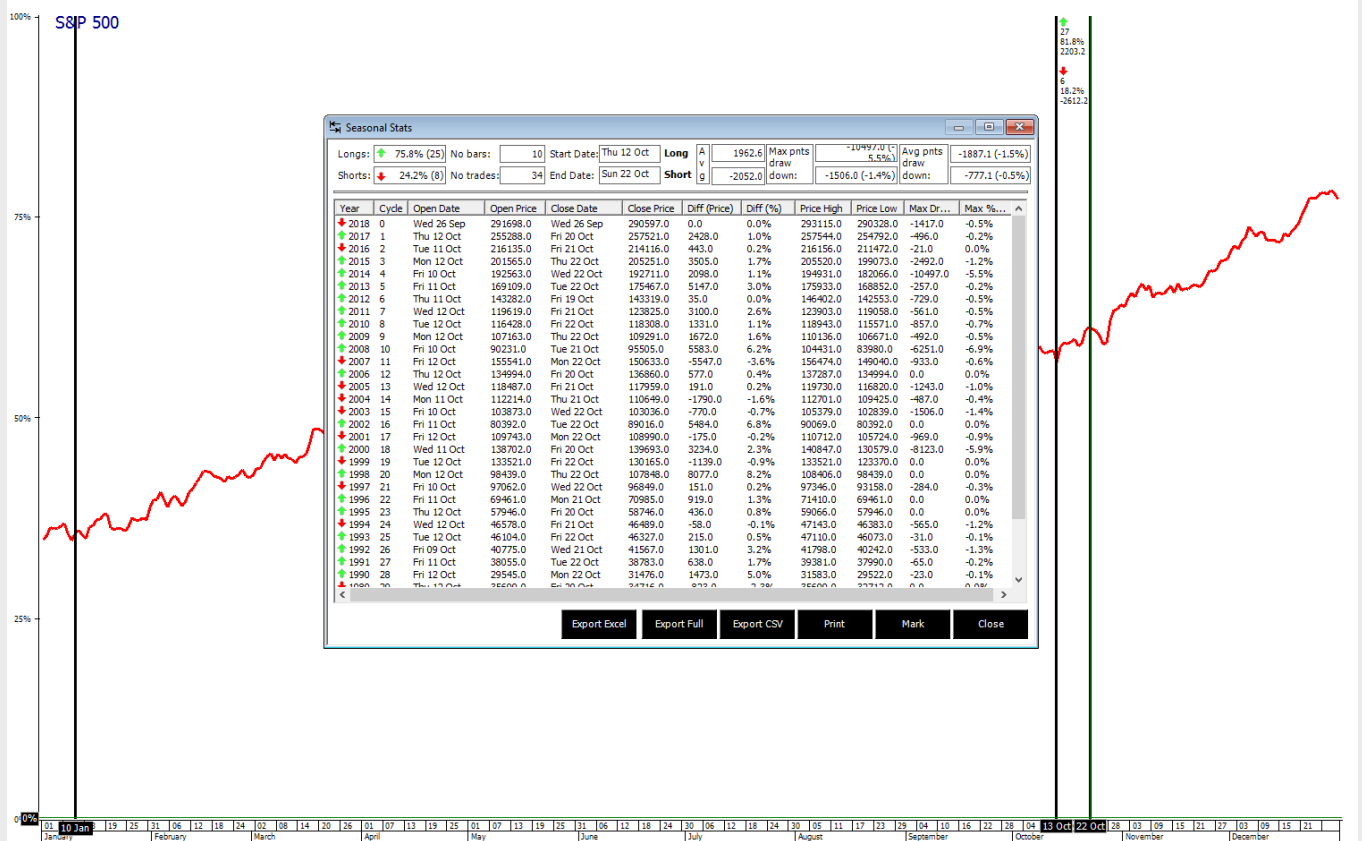

Daily statistical probabilities of note since 1985

1st Oct	19th Oct	28th Oct
75.0% Up	69.6% Up	79.2% Up

#### Conclusion/Overview

There are strong clusters of daily turning points this month but no strong weekly cycles within the month supporting the daily turns. There is a weekly cycle at the end of September as we write and we are waiting to see in this has turned the market down. The first week of November has weekly cycles suggesting a more important turn then or towards the back end of October. On this basis we would look for a daily turn point directional turns around the 11th October, then 18th October. The 23rd to 26th October is likely to see an increase in volatility as well as a turn. Note the decennial patterns suggest a low around the 27th to 28th October - this is close to the 25th/26th shown as a PFO date above. This month is really a shorter term traders market in the S&P500.

## S&P500 cont.

Since 1985 the S&P500 has closed higher on 22nd October than it was trading on 12th October on 75.8% of occasions. There is some correlation with the 20 and 30 year decennial cycles on the previous page but the evidence is not compelling this month.

# CROSS CORRELATING MARKETS

Our many years of research show that every now and then markets cross correlate. When this occurs, we have a high degree of probability in terms of cycle turning points.

Crude Oil

**INVESTORS:** There is a weekly cycle for the week ending 19th October.

The 10 year cycle sells sharply off into 29th October.

The 20 year cycle sells sharply off into 19th October then rallies into the 30th October.

The 30 year cycle sells off into 7th October then rallies into the 20th October pulling back into the 25th October then heads up.

The 19th and 20th October appear in the 20 and 30 year cycles and the 29th and 30th appear in the 10 and 20 year cycles.

Key turning point dates derived from PFO Histograms:

5th October

18th October - close to annual seasonal high

24th to 25th October

Looking ahead into November: these dates are provisional and will be updated in the next report as the cycles are fine tuned. They may also change so you must read the next edition. Other turn point dates will be added in due course.

9th November

20th November

Bias probabilities of note since 1985 on an annual seasonality basis:

4th October	9th October
73.9%	69.6%
Down	Up

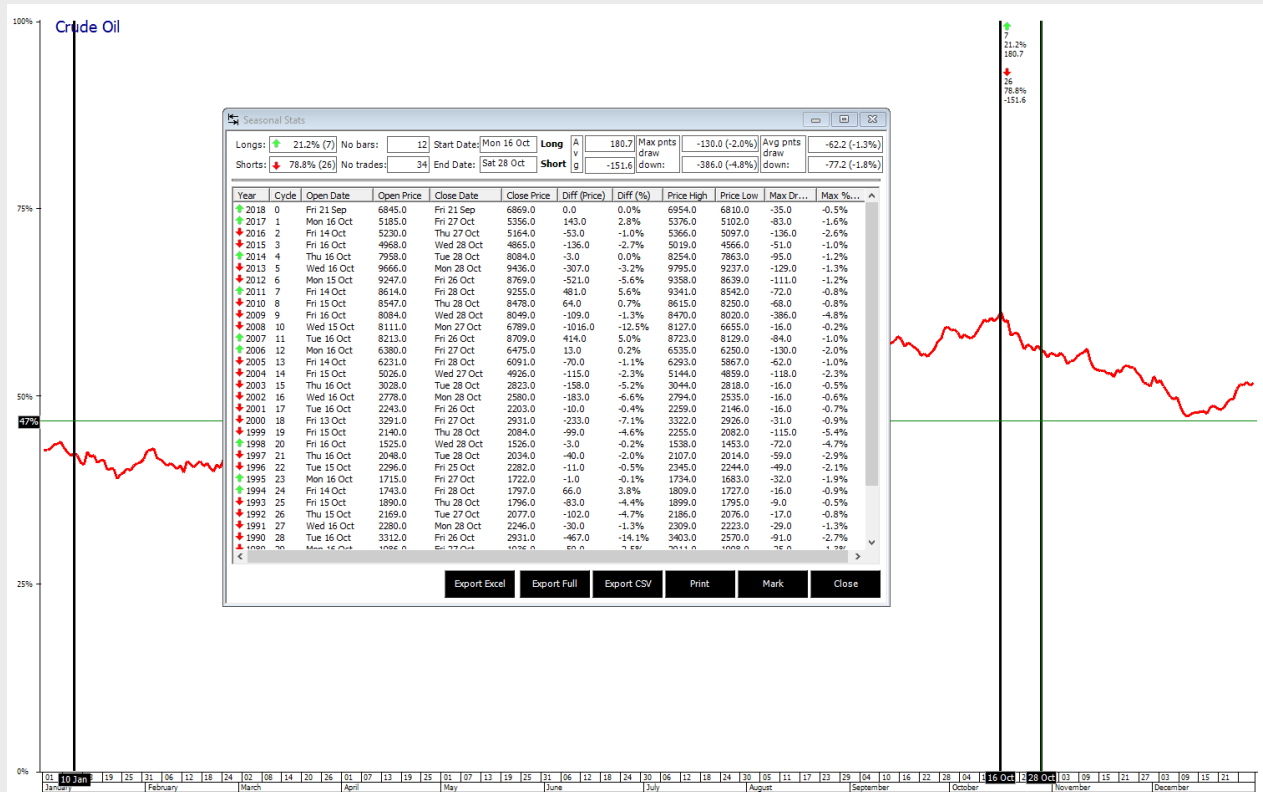

OVERVIEW/CONCLUSION/ Potential Strategy

There is a weekly cycle which coincides with the time period of the annual seasonal high (mid month).

There is a PFO date on the 18th October. If the market continues to head up then this date could see a high. However remember the 45 year geopolitical cycle shows a major bull market in 1973 following the Yom Kippur War and the subsequent actions of OPEC. We are seeing the spotlight shining in this area given that Trump is threatening sanctions against Iran which will impact oil.

## Crude Oil cont.

Based on annual seasonality, since 1985 there is a 78.8% probability that oil will trade lower on 28th October than it was trading on 16th October. The chart below is the complete seasonal pattern for oil. Seasonally oil makes a high on 16th October - this is circled in blue below.

The chart above shows December WTI Crude Oil. There are several points to note. Firstly the salmon coloured box shows the price range from the 2016 low to first major high. A doubling of this price range - depicted by the blue line takes us to a price of around 74.70. This would be a potential price target especially if hit mid month around the time of the annual seasonal high point.

Two pitchforks are drawn in.

The larger one shows the macro move and we are approaching the upper parallel. This is likely to be at least an area of resistance, if not reversal.

The smaller steeper pitchfork is identifying the faster move up that we are using at present. If the geopolitical situation with regards to Iran escalates, then this would be a potential path.

Gold

**INVESTORS:** There is a significant weekly cycle for the last week of October and the very first week of November.

The 10 year cycle sells off into 5th October then rallies into the 9th October before selling off sharply into 25th October.

The 20 year cycle makes a high on 3rd October and then sells off all month.

The 30 year cycle sees a low on 2nd October from when a major rally begins pulling back from the 18th to the 26th October.

The 10 and 20 year cycles are bearish. All three cycles see a turn during the first week of the month.

Key turning point dates derived from PFO Histograms:

1st October

8th October

18th to 22nd October

Looking ahead into November: these dates are provisional and will be updated in the next report as the cycles are fine tuned. They may also change so you must read the next edition. Other turn point dates will be added in due course.

2nd November

14th November

22nd November

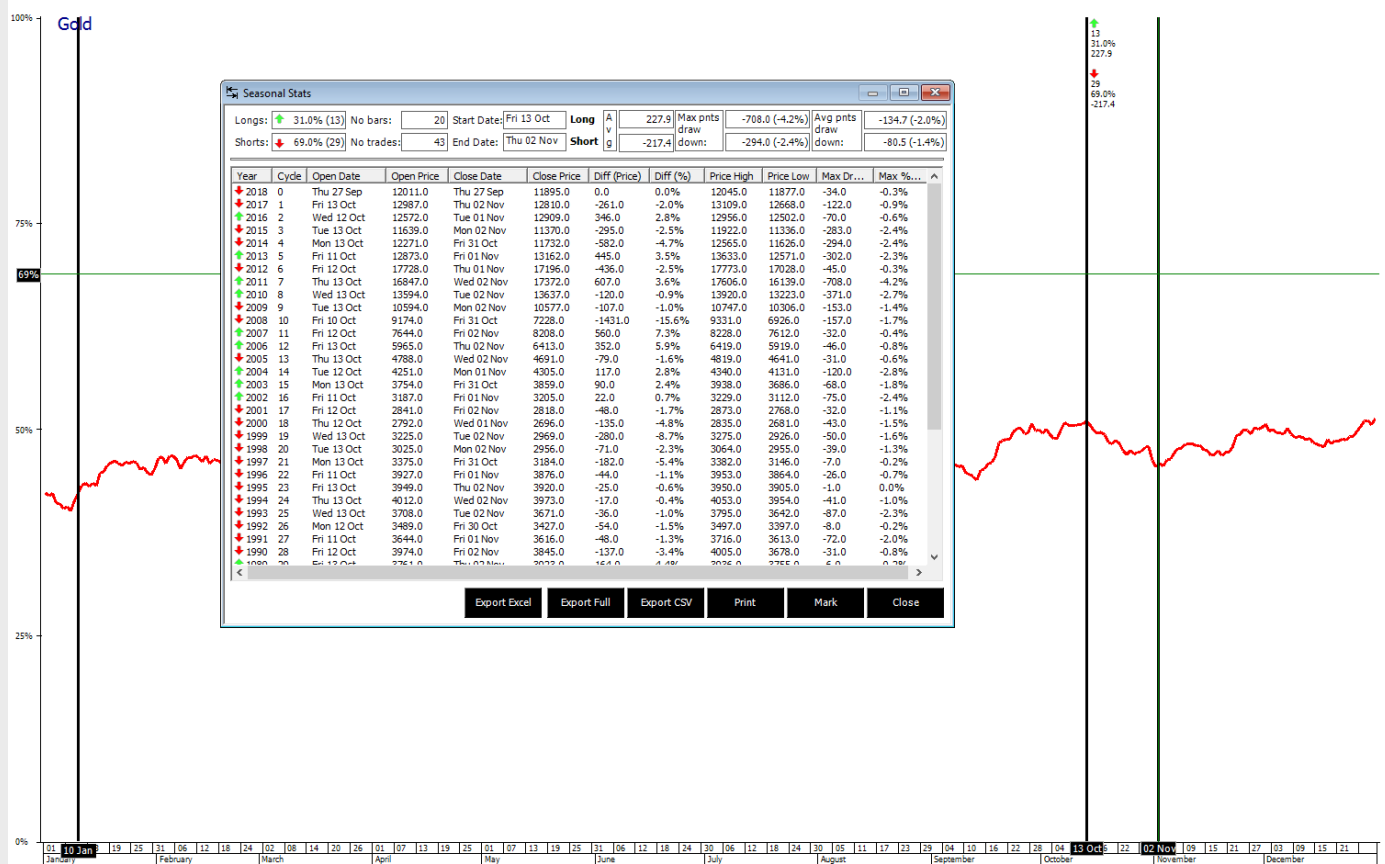

High Probability Seasonal Directional Bias dates since 1985 are

6th October	31st October
81.8% Up	78.3% Down

OVERVIEW/CONCLUSION/ Potential Strategy

Gold just went through its most bullish seasonal phase. However in that time period, the market just went sideways. This suggests that the market is inherently weak. Seasonality suggest that the gold market sells off from mid month into early November. We have significant weekly turn points then suggesting that the end of October could see a significant low.

## Gold cont.

Seasonality shown in the chart above there is a 69.0% probability that since 1985 gold will trade lower on 2nd November than it was trading on 13th October.

[www.optuma.com/MTR](http://www.optuma.com/MTR)

## Gold Futures

The chart above shows the updated super long term picture of spot priced gold. You will note how the modified Schiff pitchfork complete with warning lines generated from the late 70s to early 1980s has channeled the path of gold. We have now hit the the lower line and bounced off of it. A retest of it is possible. Below you can see that we bounced off the 61.8% retracement level and have hit the 50% level at 1211. We are now pulling back and the lower parallel is a potential target for a low.

[www.optuma.com/MTR](http://www.optuma.com/MTR)

## Gold Futures

[www.optuma.com/MTR](http://www.optuma.com/MTR)

## Gold Futures

The chart above is the super macro picture of gold since futures trading commenced.

These numbers are are major support and resistance levels that are relevant for several years.

The all time high price is around 1920 depending on which contract you look at.

50% of this level is 960. This would be a very solid support level should the market come down this far.

Also placed on this chart is the range from the 2000 low to the all time high. The fibonacci retracements are placed in. Note how the 50% level at 1087 acted as major support.

**INVESTORS:** The week ending 28th September is important at the time of writing. The next clear weekly cycle is for early December.

The 10 year cycle sees a major rally into 29th October.

The 20 year cycle makes a low on 7th October rallies into 12th October and then sells off into 18th October then rallies again into 26th October.

The 30 year cycle sells off into month end.

The 40 year cycle rallies all month into a major high on the 30th October.

The 10 and 40 year cycles rally all month into the 29th to 30th October. The 30 year cycle sells off all month. So these three cycles trend throughout the month. All four cycles exhibit a turn towards the end of the month.

Key turning point dates derived from PFO Histograms:

8th October - ties in with 20 year cycle

22nd to 23rd October

Looking ahead into November these dates are provisional and will be updated in the next report as the cycles are fine tuned. They may also change so you must read the next edition. Other turn point dates will be added in due course.

9th November

20th to 23rd November

28th November

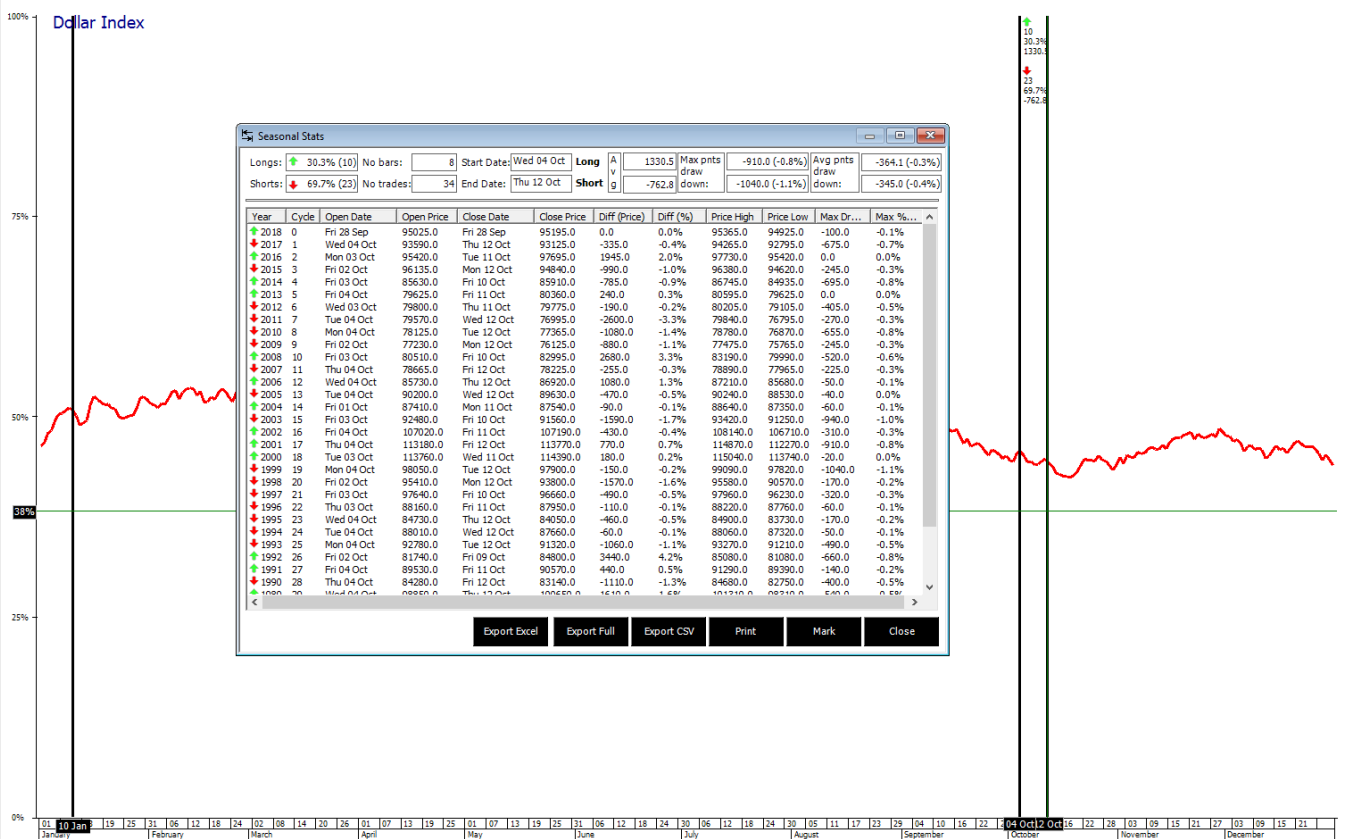

Statistical probabilities based on data since 1985 are shown above. These should always be treated with caution.

8th October
70.8%
Down

## OVERVIEW/CONCLUSION/ Potential Strategy

There is a major weekly cycle at the end of September. We need to see how this plays out. Decennial cycles suggest a trending market. However, we are presently in a range. The direction is unclear so we need a confirmed breakout from the horizontal lines shown on the following page. Seasonality suggests a down move at least for the first part of the month. However, this cannot be relied on so we must let the market prove the direction.

## Dollar Index cont.

The chart above shows that since 1985, the Dollar Index has a 66.7% probability that it will trade lower on 12th October than it was trading on 4th October. The chart below three horizontal lines depicting the range that the Dollar Index is in. We need to see a clear break of either the upper or lower line

Dollar Index cont.

The chart above shows a macro pitchfork which is predominantly bullish despite the DX being in a short term range.

Given this situation, the chart below defines the potential path of price moment if the market continues upwards.

**INVESTORS:** There is an important weekly cycle week ending 19th October. Thereafter we see a weekly cycle for the week ending 23rd November.

The 10 year cycle shows a significant collapse into 28th October when a major low is made.

Key turning point dates derived from PFO Histograms:

8th October

22nd to 23rd October

Looking ahead into November: these dates are provisional and will be updated in the next report as the cycles are fine tuned. They may also change so you must read the next edition. Other turn point dates will be added in due course.

2nd November

12th to 13th November

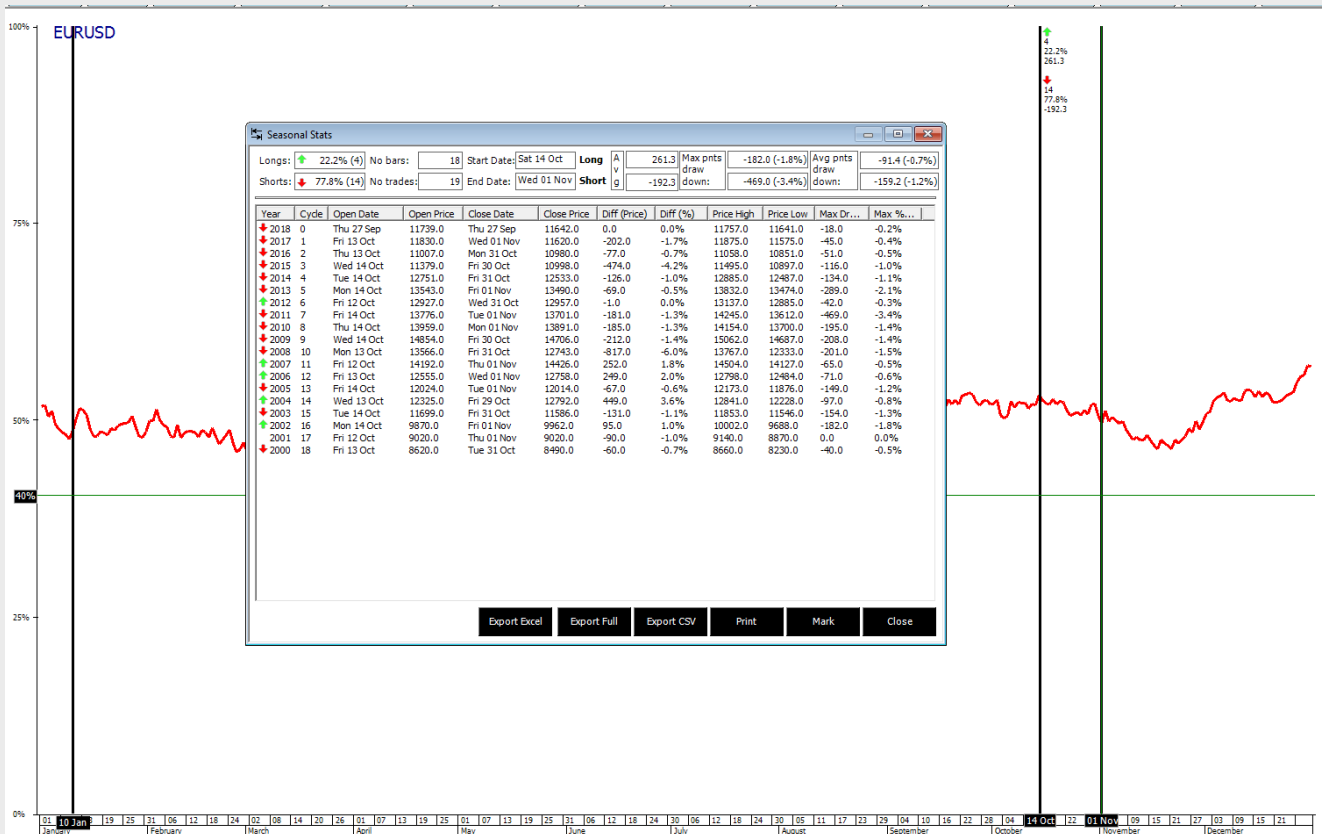

22nd November

High Probability Bias Dates - treat with caution due to limited sample size dating back to 1999.

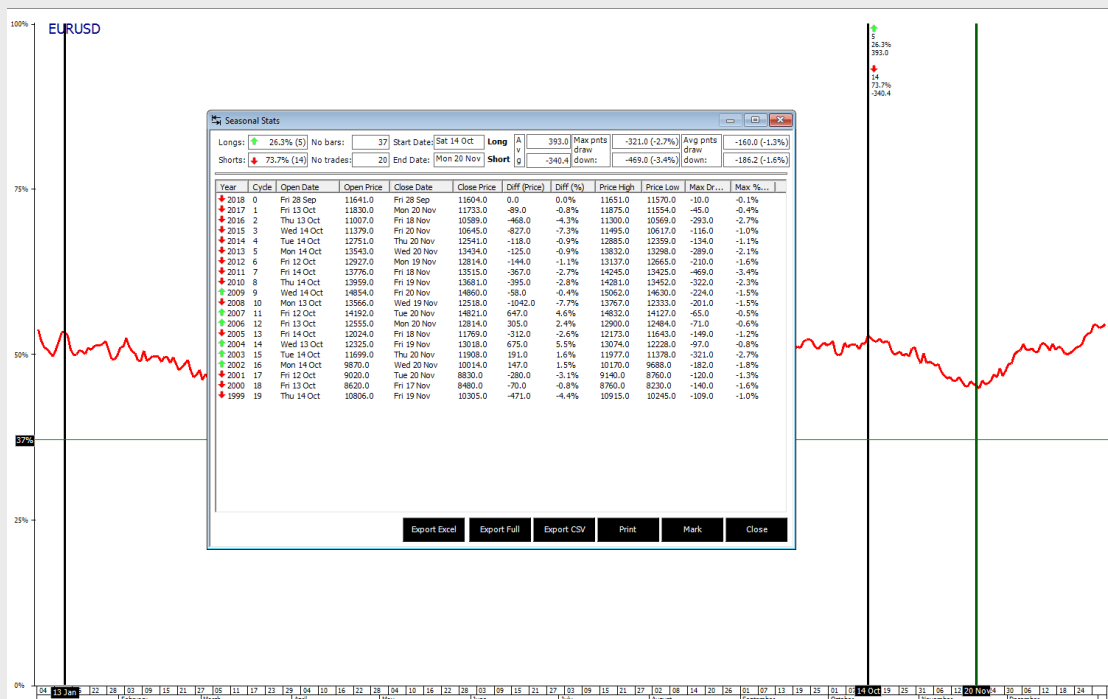

3rd Oct	18th Oct	24th Oct
69.2%	75%	76.9%
Down	Up	Up

#### Conclusion/Strategy

Presently we are within a range and we need confirmation of a breakout as shown on the following pages. Seasonally the last half of the month of October is somewhat bearish - typically from around the 14th October - we have a weekly cycle that week too - this time period could see the beginning of a decline. If this occurs, it should continue for at least a week if not longer. The decennial pattern suggests a low around the 28th October and we have PFO dates a few days before then. However seasonality can suggest a low as late as 20th November. Geopolitically, the cycles are bearish for the Euro but this is not a high quality technical indicator.

There is a 77.8% probability that, since 1999, the EURUSD will trade lower on 1st November than it was trading on 14th October. In the chart below you will see that seasonally, since 1999, the Euro enters a bearish phase on 14th October closing lower on 20th November on 73.7% of occasions.

The chart above shows that the EURUSD is trading within a range defined by the green lines. Any clear trending move can only be confirmed by a bullish breakout above the top green line and a close above the high shown by the red arrow. Or a bearish breakout below the bottom green line with a close below the line.

## Summary of Timing Point Dates

## SUMMING IT UP!

"The thing that hath been, it is that which shall be; and that which is done is that which shall be done: and there is no new thing under the sun." Eccl 1.9

Whilst the equity indices in the USA continue to head up, October is always a month that we should be cautious about. Pullbacks are often seen at this time. Global uncertainty is likely to increase and in so doing, will bring volatility. Geopolitical events of serious consequence are likely to occur around the 11th, 18th and 27th October. Some of these are likely to impact the markets. The editorial highlights potential flashpoint. You are forewarned and therefore forearmed!

We often get enquiries on how to leverage the information provided in The Market Timing Report. In response to this, we are pleased to announce a tie up with Infinite Wealth Trading. This company, under the leadership of Dale Gaucas, specialises in various types of trading course for beginners, FX day traders all the way through to professional portfolio management. They have produced very successful traders. I will be

collaborating on the limited "War Room" Programme in which participants will learn how to combine time cycles with the key techniques that support them. This is an exciting project and one which will allow members access to a larger range of output from our systems.

If you would like more information either contact us at [support@cyclesanalysis.com](mailto:support@cyclesanalysis.com), take a look at [www.infinetwealth.com](http://www.infinetwealth.com) or call Dale and his team on +44 161 710 2771.

Thank you again for your business and we fully appreciate that our success is based on your success.

Andrew Pancholi

# NEW NEW NEW 2018-19 CANADIAN DOLLAR

Time and time again we receive requests for long term turning points across different markets. Historically we have only provided this to major banks and institutions but as many of you are asking we have made this one available for you. Not only that ....

**FOR A LIMITED TIME ONLY WE ARE OFFERING  
SUBSCRIBERS OF THE MARKET TIMING REPORT A  
MASSIVE 50% DISCOUNT**

TO CLAIM YOUR DISCOUNT TYPE THE COUPON CODE

**LOYALTY**

INTO THE ORDER FORM

YOU WILL THEN RECEIVE THIS REPORT FOR \$497

CLICK HERE TO ORDER NOW

<https://ws227.infusionsoft.com/app/orderForms/Canadian-Dollar-Turning-Points>

THIS DISCOUNT COUPON CODE IS ONLY AVAILABLE FOR A SHORT WHILE

Note - There are NO REFUNDS AVAILABLE all sales are full and final.

# NEW NEW NEW 2018-19 CANADIAN DOLLAR

## 2018-19 CAD TIMING REPORT NOW OUT

### • New Report

#### BENEFITS

- Major Turning Points for 2018 to December 2019 generated from the Cycles Analysis PFO system
- Weekly Turning Points for 2018 to December 2019
- High probability seasonal setups
- Runs from June 2018 to December 2019
- One Off Report - no updates
- 14 Pages
- Ideal for positions traders, investors, hedgers

The CAD profit finding oracle system identified these turns all well in advance.

# 2018-19 GRAIN REPORTS OUT NOW

## 2018-19 GRAIN TIMING REPORTS NOW OUT

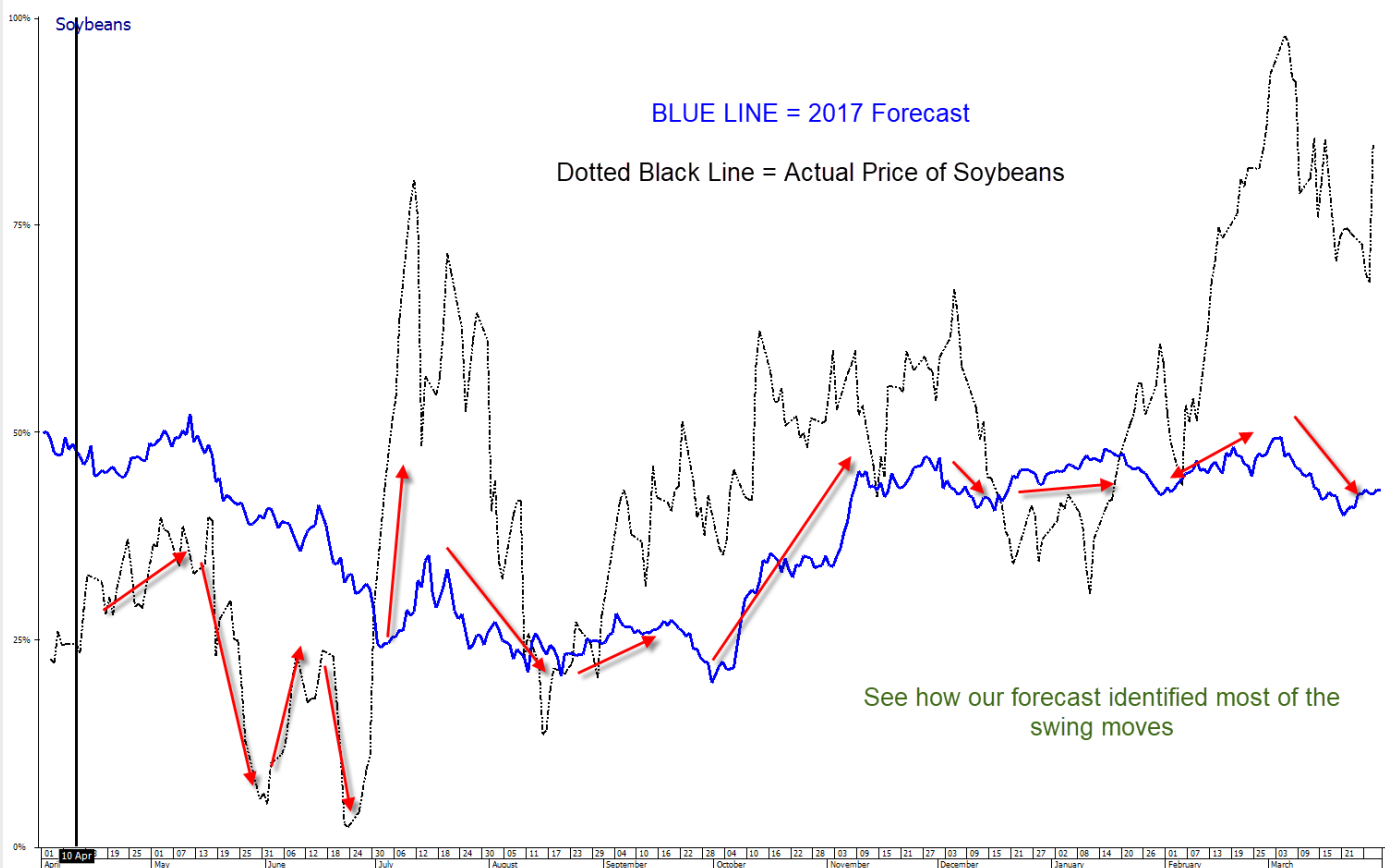

- Three New Reports
- Soybeans
- Wheat
- Corn

### BENEFITS

- Major Turning Points for 2018 to April 2019 in each Master Report generated from the Cycles Analysis PFO system
- Initial Forecasting together with the curves. See below
- Master Report and May 2018 Update now available
- Updated Monthly - with daily turning points
- Daily Percentage Probabilities & Seasonal set ups
- High probability seasonal setups that are confirmed with forecast
- Runs from May 2018 to April 2019

The soybean forecast profit finding oracle system identified these turns all well in advance.

Many subscribers to the MTR have been requesting this information. Historically these reports have been made available to Funds and Institutions for FIVE FIGURE sums. Following numerous requests from readers of the MTR, we have decided to release them to our loyal subscribers. Each report, complete with annual subscription, is US\$1997 or all three can be purchased for a special 50% discount of US\$2997. Any two reports discounted to US\$2497. Due to the nature of the information, all sales are final and no refunds are permitted.

SAVE 50% on All three Wheat, Soybean and Corn Reports with MONTHLY updates \$2997

“Harry S. Dent, Jr. and I have, in our respective research, been warning about the unprecedented and unsustainable global and U.S. debt build up for over a decade now. We both agree that a ‘great reset’ is inevitable at this point, and will destroy much of our financial assets, banks, and businesses. But Harry adds a deeper political revolution from his and Andy Pancholi’s impressive cycle work, which has clearly already begun. A must-read book!”

—John Mauldin, author of Code Red

Harry S. Dent Jr., bestselling author of *The Demographic Cliff* and *The Sale of a Lifetime*, predicted the populist wave that has driven the Brexit vote, the election of Donald Trump, and other recent shocks around the world. Now he returns with the definitive guide to protect your investments and prosper in the age of the anti-globalist backlash.

The turn of the 2020s will mark an extremely rare convergence of low points for multiple political, economic, and demographic cycles. The result will be a major financial crash and global upheaval that will dwarf the Great Recession of the 2000s—and maybe even the Great Depression of the 1930s. We’re facing the onset of what Dent calls “Economic Winter.”

In *Zero Hour*, he and Andrew Pancholi (author of *The Market Timing Report* newsletter) explain all of these cycles, which influence everything from currency valuations to election returns, from economic growth rates in Asia to birthrates in Europe. You’ll learn, for instance:

- Why the most-hyped technologies of recent years (self-driving cars, artificial intelligence, virtual reality, blockchain) won’t pay off until the 2030s.
- Why China may be the biggest bubble in the global economy (and you’d be a fool to invest there).
- Why you should invest in the healthcare and pharmaceutical industries, and pull out of real estate and automotive.
- Why putting your faith in gold is a bad idea.

Fortunately, *Zero Hour* includes a range of practical strategies to help you turn the upheaval ahead to your advantage, so your family can be prepared and protected.

“The title *Zero Hour* is woefully inadequate to capture the broad array of historical, economic, psychological, political, social, diplomatic, military, technological, demographic, and global trends covered in this book. Whether you are an investor or interested observer, you will want to read how Dent and Pancholi challenge many well-known views, including my own, on interest rates. Regardless of whether you agree or not, you will benefit from reading their new book, evaluating their arguments, and learning their perspective on a great many issues vital to our economic future.”

—Lacy Hunt, PhD, Economist, Hoisington Investment Management

## Market Timing Report Institutional Service

As many of our longest standing customers are aware, our timing systems and other information were previously made available only to major institutions and funds. The Market Timing Report was created in response to huge demand for an easily affordable retail product.

We are pleased to announce The Market Timing Report Institutional Service. The service is specifically devised for high net worth individuals and professional money managers and offers an extensive range of information.

### ADD VALUE TO YOUR STRATEGY

The Market Timing Report Institutional Service (MTRIS) fills the void between fundamental research, conventional technical analysis, economic data and geopolitical events through the medium of predictive analytics. As a fund manager, one typically comes to the point where there is no need for, or any

In order to maximise the benefits to our valued clients, we strictly limit the number of subscribers. We currently have three places available and are inviting applications.

The costs of the subscription starts from 3000 Euros per month. Full portfolio evaluation can be provided for 5000 Euros per month.

If you'd like more information on the services, please email us at the first instance at [info@cyclesanalysis.com](mailto:info@cyclesanalysis.com). Please include your full contact details including telephone number and the time zone you are operating in and we will arrange a call to discuss your requirements to see if this service is appropriate for you and how we can add value.

value added with additional fundamental opinions, such as the twentieth opinion on Apple Computer. The MTRIS discipline focuses on price and adds value through the development and the application of the cycles discipline. These tools add the value that is necessary to outperform the benchmark and the competition.

### IMPROVE EQUITY PORTFOLIO PERFORMANCE:

Unique Relative Strength Analysis

Cycles Projections Through Dynamic Price Projection

Benchmark Analysis

#### SERVICES INCLUDE:

Scientifically-derived forecasts: Cycle Projections (CP)  
All CPs are back-tested to show reliability  
Applicable to prices of any asset class or economic time series  
Specialised long-term studies  
Portfolio and market scans  
Large global database with many long-term time series.

This information is transmitted by weekly reports and by telephone consultations.

#### Weekly Report

Short and intermediate-term projections for the US Indices  
Analysis of the US sectors and groups  
Short and intermediate-term projections for the European Indices  
Short and intermediate-term projections for the Asian Indices  
Short and intermediate-term projections for the Middle Eastern Indices  
Short and intermediate-term projections for Bond Markets-US, Europe, Japan  
Analysis of the currency markets  
Analysis of the commodity markets  
Trade recommendations

#### Monthly Cycles Projection Reports

CP reports project prices for stocks in the S&P 400, 500, and 600 as well as the DJIA and the NASDAQ

#### Customised Reports

Reports can be issued based upon clients' requests for any time series  
Available for telephone consultations seven days per week

## MEMBERS AREA

In order to make distribution of the Market Timing Report more efficient, we have a members area. You can log in and download the latest report.

Each report is released around the first trading day of each month.

If you have not received log in details, please let us know.

The members area is at

<http://members.markettimingreport.com>

Your User Name is your email address.

This will also overcome the problem of emails ending up in spam folders. So please do check the members area around the first TRADING DAY of the month.

## COPYRIGHT

All rights reserved. No part of this publication may be reproduced, distributed, or transmitted in any form or by any means, including photocopying, recording, or other electronic or mechanical methods, without the prior written permission of the publisher, except in the case of brief quotations embodied in critical reviews and certain other noncommercial uses permitted by copyright law. For permission requests, write to the publisher at [support@cyclesanalysis.com](mailto:support@cyclesanalysis.com).

# Cryptocurrency

For those of you that are interested in Crypto currencies, I would like to draw your attention to one that I have become involved with. This would be of particular interest to our subscribers in South America and particularly Brazil. It would also potentially benefit anyone interested in diversifying their portfolios. Full detail can be found here [https://ico.criptohub.com.br/?utm\\_source=mtr](https://ico.criptohub.com.br/?utm_source=mtr) They have a strong team and I believe they could dominate the South American Cryptocurrency market.

## Delivery and Release Dates of the Market Timing Report

From time to time some of our subscribers contact us saying that they haven't received the latest edition of The Market Timing Report.

The report usually comes out on the first TRADING DAY of each month.

From time to time, we also send out updates.

We use Infusionsoft as our delivery system and some email servers may send some of our transmissions into your spam folders.

Please would you check your spam folders for any links from

[andy@cyclesanalysis.com](mailto:andy@cyclesanalysis.com)

[info@cyclesanalysis.com](mailto:info@cyclesanalysis.com)

You also need to make the above address "safe" so that you receive futures communications from them.

The link below explains how to do this.

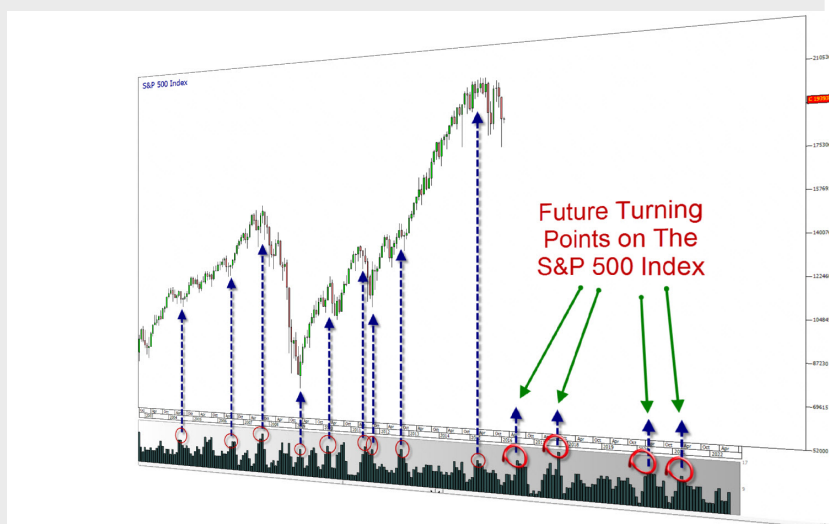

<http://support2.constantcontact.com/articles/FAQ/2753#gmail>

## Notes On How To Use The Information In Each Section

Welcome to the many new subscribers joining us this month. Historically this letter has been designed for experienced traders who were looking for timing information to fine tune their existing trading systems. I appreciate we have some folk with less experience so here is an overview of the information provided on each page.

Each section starts with the decennial cycle which is known within the stock indices. It also works very well in commodities and currencies. We will often see similar direction and also similar dates of turns. Where there is commonality in these cycles, we can often derive a coarse road map which we can then fine tune with the next pieces of data.

The most important and accurate information is derived from our propriety Profit Finding Oracle (PFO) System. This comes from our Cycles Analysis software suite and enables us to identify high probability turning point days. These are very specific to the current time period. **THIS IS THE MOST VALUABLE INFORMATION** and is unique to The Market Timing Report. The output is derived from various differing histogram sets. These are run over several different time periods using a series of algorithms. The bottom line is that wherever a peak occurs in the histogram below the chart, a turn can be expected. Occasionally they can be accelerations. This information, when combined with your own indicators will give you the edge. There is more information on this in the back section of this report. This system has had much success in identifying pretty much all the main turns in the markets over the last few years. Long standing readers will note the cycles that identified the the exact high on the Euro in May 2014, the collapse of Crude Oil, and the swing highs and lows shown on the S&P500 chart on the previous page were all published in advance in the MTR. Generally speaking the cycles are broken down into weekly and daily cycles. If you are an investor or swing trader, then the weekly cycles will be most important to you. Within a weekly window, we often find a daily cycle and this more often than not will be the exact date of the beginning or end of a trend.

The next piece of information given is that relating to high probability directional one day moves. An example of this is on the S&P 500. It says that there is a 71.4% probability - from our data set i.e. April 14th was an “up” day compared to the previous day, 71.4% of the time. It doesn’t mean that it will go up this time.

Again, this is useful information when combined with your own indicators and support/resistance levels.

12th Apr

71.4%

Up

The last piece of information we provide, when we believe it to be meaningful, is that based on seasonal probability. For example “since 1985, our system shows that there is a 74.2% probability of the S&P500 trading higher on 2nd May than on 15th April.” This does not guarantee that the market will head straight up - in fact it may head lower first (drawdown) but will eventually close higher on the later date. This is based on an average of all the years. When this ties in with the PFO dates, this can be very potent, especially if the predominant trend is in the same direction.

## A Note To New Subscribers (and a reminder to to our long standing friends!)

Welcome to all our new readers. We are acutely conscious that you have varying degrees of experience and are from differing backgrounds. Originally this letter was created for experienced traders and investors to offer timing advice from our propriety system. They take this information and combine it with their own trading/investment systems in order to give them a clear advantage. Risk management is an essential part of this process.

So here are a few words of caution as well as advice on how to use the contents of this letter.

Firstly, The Market Timing Report is NOT The Holy Grail. It will, however, give you a positive edge!

You must combine this information with a system that works for you, your time frames, risk tolerances and your goals. We cannot do this for you as everyone is different.

If you are an investor, then pay particular attention to the information in red font in each section. This is all you need to know.

If you are a trader, look at the PFO dates.

All parties - read through the report in its entirety - it may seem a little dry in places - but this is how you will succeed as you learn the techniques by osmosis. Study each chart over each issue.

Not every turn point will generate a set up that can be actioned. However, many will offer golden opportunities. These turn points based on cycles will allow you to exit or enter positions when the mass public is living in hope fear or greed. We know of no other publications that can offer long range cycle information. You will know when to act whilst others panic. More on that closer to the time. Most turning point dates are likely to be reversals; however, occasionally accelerations can occur. The seasonal set ups shown in this report can pullback and drawdown. Protect yourself and confirm these moves with your own analysis.

## Key Reversal Overview

A key reversal is a one day trading pattern that may signal the reversal of a trend. Other frequently-used names for key reversal include "one-day reversal" and "reversal day."

Depending on which way the market is trending, a key reversal day occurs when:

In an uptrend -- prices hit a new high and then close near the previous day's lows.

In a downtrend -- prices hit a new low, but close near the previous day's highs.

The greater the price range and volume on the day that this occurs, the more reliable the signal will be.

The rules for trading a key reversal are straightforward. For a bottom buy at the next day's open and place your stops just beneath the prior low. For a key reversal top, sell on the open following the reversal and place stops just above the prior day's high. Manage your risk.

All the above information is also true for a single bar on a weekly or monthly chart.

# WHAT WE DO

Several readers had made enquiries so here is an overview of our methodology.

## Cycle Forecasting

Regardless of whether you are a fundamental trader or a technical trader, the timing of trade entry is absolutely critical to your profitability. After more than 20 years of research and study of cycles, our proprietary software generates turning points in different time frames. This is a complex process. The purpose of this monthly letter is to provide you with an overview of critical time zones when trend changes are highly likely. You do not need to worry about the complexity as we take care of this for you. For the most part trend changes are reversals but from time to time accelerations can occur.

We also combine this with seasonality - a powerful and commonly used system. We enhance this with our proprietary forecasting models. We are not infallible but do believe that this information, especially when combined with other techniques can give you a VERY SIGNIFICANT EDGE. This research looks at very many aspects of forecasting and we leave no stone unturned. Our super macro cycles will go back thousands of years, however more relevant economic cycles review events over the last centuries.

A simple example of this is shown by the 100 year cycle and its half cycle of 50 years. Historians amongst you - and be aware that most of the world's greatest traders and fund managers have studied history, will be aware of the massive panic of 1857. This was the biggest economic meltdown in the modern world with both the USA and Europe being severely hit. The railroad boom just peaked, The Ohio Life Insurance and Trust in Cincinnati failed and down came the house of cards. Credit dried up overnight. A major depression kicked in. Well 50 years later credit suddenly dried and the economy went pop. The 1907 Rich Mans Panic was taking place. Hence it was easy to forecast the events of 2007. We presented this information in advance at a private seminar prior to the event. The "Global Financial Crisis" is now history. Warn your children and grandchildren about 2057! Of Course there is a little more to this and that is what we are here for. However, sometimes there are gifts to be had! Here is the US market almost to perfection!

So we distil macro events down to daily (and even hourly) cycles and are thus able to forecast probable areas of change.

# WHAT WE DO

Several readers had made enquiries so here is an overview of our methodology

Cycle Forecasting cont.

So we distill macro events down to daily (and even hourly) cycles and are thus able to forecast probable time zones of change.

The cycles are resolved into histograms and trend changes are possible where spikes occur. These histograms can forecast weeks months and years into the future. The cycles are resolved to different time frames and type sets as shown in the lower examples.

# WHAT WE DO

Several readers had made enquiries so here is an overview of our methodology.

Cycle Forecasting, cont'd.

Finally, the last part of our procedure looks at seasonal probability. Many millions and indeed billions are made using seasonality and we take advantage of this. When our proprietary cycles coincide with seasonal turns, we have very high probability set ups. Conversely, if we know that a seasonal turn is coming up yet we do not have any cycles coinciding, then there is a high probability that this will fail. This improves accuracy remarkably.

Once again we take account of all this in our letter.

We also look at daily statistical probabilities but these are less significant.

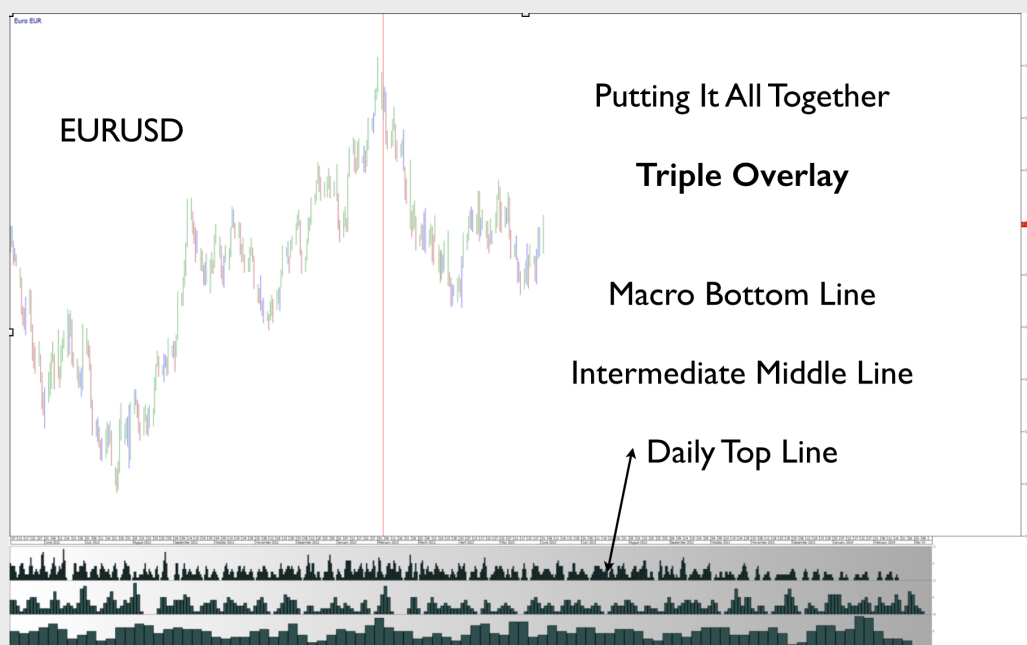

# WHAT WE DO

Several readers had made enquiries so here is an overview of our methodology

Cycle Forecasting cont.

We can then this several stages further by by adding different layers which also help us identify when the the major and minor cycles align. This is shown below.

# RESOURCES & PRODUCTS

## MARKET ANALYST/OPTUMA

We recommend and indeed use this software within our reports. There is a special deal if you click on the link below.

### Advanced Technical Analysis Software

Market Analyst 8 is an Advanced Technical Analysis software program designed for advanced traders of financial markets, but don't let that scare you off! We have spent years (actually we've been at this since 1996) focusing on ways that we can give our clients all the benefits that a modern computer has available and package it in an interface that is extremely easy to use. Just in case you have not considered Technical Analysis before, we can sum it up like this: If you applied a mathematical formula to the historical data of a stock and you saw that the formula turned up just before the stock turned up seven out of ten times, you would have a good statistical basis for trading the next time you saw the formula turning up. It's not a guarantee. You are using the analysis to help you identify the trading opportunities.

In Market Analyst we call the formulas, like the one mentioned above, tools. Each tool has been developed with a different strategy in mind. Some work better on particular markets than others. Some are very esoteric in how they work. Regardless, Market Analyst has over two hundred tools available to allow each trader to find a strategy that suits them best.

# RESOURCES & PRODUCTS

Over the years I have met and worked with many people across a range of industries. Malcolm Graham Wood is a true expert in the Oil and Gas Arena and writes a regular blog which is FREE. He is a man whose knowledge I value and whose company I really enjoy.

<http://www.malcysblog.com>

Malcolm has over 30 years' experience in the Oil & Gas sector and is a widely used media source. He often appears in print and on screen, and also writes an acclaimed daily blog read by much of the resources industry as well as investors both institutional and retail.

Malcolm is a Founding Partner of HydroCarbon Capital, which provides independent advisory services to the Oil and Gas sector. He is a Director of the Maven Income and Growth VCT 4 PLC, a venture capital trust listed on the Premium segment of the main market of the London Stock Exchange.

He started his career at Wood Mackenzie in 1979. He was an inaugural member of the No 1 Extel rated James Capel Oil & Gas team and also headed up corporate broking, acting for the Government in sales of British Gas, Britoil and other utilities. Subsequently he became Head of Equities and main board Director at Williams de Broe before moving to Teather & Greenwood. Following that, he ran his own consultancy for several years, acting for a number of quoted and private companies as well as being a board member and advisor. He has been a Director at Noble and then Westhouse Securities and has extensive contacts in the Oil & Gas sector globally. More recently Malcolm has been the lead advisor to an HSBC Zurich trust on oil, gas and energy investments as well as working with the oil team at VSA Capital.
